Savan Vachhani, PhD

Data Consultant

Hi there 🙌 thanks for checking out my profile!

I’m Savan, a management consultant for heavy industries (such as mining, oil & gas and energy). My primary focus area for consulting is DDaT (Digital, Data and Technology). My work sits at the intersection of business and technology, with a focus on turning complex operational challenges into practical, user-centric solutions.

I started my journey in Electronics Engineering before completing a PhD in Computer Science. Since then, I’ve applied my digital and analytical skills in real-world industrial environments, including nearly four years supporting a potash mining project, followed by broader management consulting experience at Baringa.

Over the past seven years, I’ve worked with cross-functional teams to define requirements, engage stakeholders, design workflows, build data products, and support deployable technology solutions. I’m skilled in Python, Power BI, and data analysis, and I’m continuing to deepen my focus on data science and AI applications that create measurable business impact.

I’m now focused on growing further in the field of data, analytics, and AI, and I’m always open to connecting with people working on meaningful technology, data, and transformation challenges.

Thanks again for visiting my profile, and I look forward to connecting with you here.

Savan Vachhani, PhD

Data Consultant

Savan

- Is a technology consultant for heavy industries and focused on building technology-enabled and data driven solutions that drive operational decisions.
- Worked at Baringa Partners for over three years advising heavy industry clients and building analytical solutions for them.
- Worked at the mining company Anglo American for nearly four years, exploring the application of emerging technologies such as IoT, Computer Vision and AI for their application in real-world mining use cases.
- Was instrumental in launching Baringa’s first SaaS product – Energy Solution. He primarily worked as QA assessing the quality of product and ensuring the accuracy and reliability of output.

Full right to work as British Citizen

Senior data and analytics professional with seven years' experience delivering BI, reporting and analytical solutions across consulting and industry. Skilled in SQL, Python and BI tools, with strong experience translating complex business needs into dashboards, data models and insight products for senior stakeholders. Comfortable working with data engineers, DevOps teams, product teams and business users to improve reporting reliability and decision-making. Brings commercial awareness, structured problem solving and hands-on delivery experience across energy, chemicals, oil and gas, and mining environments.

Experience

Senior Data and Analytics Consultant at Baringa Partners – Full-time (Jan 2023 – May 2026)

- Delivered end-to-end data and analytics solutions for energy, chemicals and oil & gas clients, translating ambiguous business questions into structured reporting products, dashboards and insight packs for operational and leadership decision-making.
- Designed and built a Power BI training performance analytics suite for a chemical client preparing for a major 2027 plant launch, enabling leaders to monitor workforce readiness, training completion and delivery KPIs against strategic milestones.
- Partnered with stakeholders across six departments for an oil & gas client to gather requirements, define KPIs and deliver six operational dashboards within four months, improving visibility of business performance and reducing manual reporting effort.
- Applied SQL, Excel, Power BI and Python across analytics delivery, including data cleaning, modelling, metric definition, dashboard build and insight generation from complex and imperfect source datasets.
- Worked regularly in cross-functional teams involving client stakeholders, data engineers, DevOps teams, product teams and technical delivery colleagues to align reporting requirements, resolve data issues and support reliable delivery.
- Acted as QA and Release Lead for a Baringa's first SaaS product called [Energy Solution](#) related to PPA (Power Purchase Agreement), defining user stories, managing testing cycles, and ensuring deployment readiness.
- Used data storytelling and structured communication to brief non-technical stakeholders, explain analytical outputs clearly and turn dashboard findings into practical business actions.

Technology Research Analyst at Anglo American Plc – Full-time (2019 – 2022) – Delivered technology & innovation initiatives in a complex industrial environment, helping translate operational challenges into technical requirements for [digital mine](#) (e.g. connected-worker PoC).

- Delivered technology and innovation initiatives in a complex industrial environment, helping translate operational challenges into technical requirements for digital mine, connected worker and analytics-led use cases.
- Developed an IoT and connected worker proof of concept using sensors, embedded systems and data platforms, building practical experience of taking early-stage technical ideas toward real-world operational application.
- Contributed to AI and machine learning initiatives, including tunnel inspection and ore-processing optimisation use cases, strengthening understanding of how analytical techniques can be applied to asset-heavy business problems.
- Worked with external partners, universities, consultants and internal technical stakeholders
