Full right to work as British Citizen

Data-focused consultant with over seven years' experience across consulting and industry, specialising in transforming complex data into actionable insights. Proven track record delivering Power BI dashboards, analytics solutions, and stakeholder-facing products across energy, chemicals, and mining sectors. Combines strong analytical skills (SQL, Python) with business acumen to design intuitive data solutions. Experienced in working across the full lifecycle—from requirements gathering to delivery – now seeking to build scalable, user-centric analytics products in a data analytics role.

Experience

Management Consultant at Baringa Partners – Full-time (Jan 2023 – May 2026) –
Delivered end-to-end analytics and visualisation solutions across multiple client engagements, translating ambiguous business problems into structured data products and dashboards.

- Designed and built a Power BI training performance analytics suite for a chemical client, enabling leadership to track workforce readiness for a major plant launch (2027), aligning with strategic KPIs.
- Partnered with stakeholders across six departments for oil & gas client to gather requirements and deliver six operational dashboards within four months, improving KPI visibility and reducing manual reporting effort.
- Acted as QA and Release Lead for Baringa's first SaaS product, ensuring data quality, testing integrity, and successful deployment – building understanding of product lifecycle and governance.
- Applied data storytelling techniques through Power BI and PowerPoint to influence decision-making among non-technical stakeholders.
- Contributed to pro bono analytics work by cleaning, analysing, and presenting insights from raw datasets in Python.
- Demonstrated strong stakeholder management by working closely with clients to define KPIs, refine requirements, and iterate on dashboard designs.
- Gained exposure to service design and user-centric delivery approaches, aligning analytics outputs with real user needs.

Technology Research Analyst at Anglo American Plc – Full-time (2019 – 2022) –
Delivered technology & innovation initiatives in a complex industrial environment, helping translate operational challenges into technical requirements for [digital mine](#) (e.g. connected-worker PoC).

- Developed IoT and connected worker PoC using sensors, embedded systems and data platforms, demonstrating practical experience of taking early-stage technical ideas toward real-world application.
- Contributed to AI and machine learning initiatives, including tunnel inspection and ore-processing optimisation use cases, building familiarity with how advanced analytics can be applied in asset-heavy operations.
- Translated operational needs into technical requirements for digital mine initiatives, bridging the gap between frontline business context and technology delivery.
- Worked with external partners including universities and consultants on research and

development activity, coordinating across technical stakeholders and supporting collaborative problem solving.

- Contributed technical research and literature review to a £5m innovation grant proposal, showing the ability to turn emerging technology ideas into credible business cases and structured propositions.
- Also supported broader IT and technology delivery activity, giving additional grounding in operational support, user needs and the realities of implementation in a complex business environment.

Teaching Assistant at The University of York – Part-time (2014 – 2018) – Delivered teaching support across computer science, electronics, and mathematics department, simplifying complex technical concepts for diverse student groups and strengthening communication, mentoring, and problem-solving skills in structured and academic environments.

Graduate Engineer at Ericsson, India – Full-time (2013 – 2014) – Provided IT support to Cricket Wireless of the USA and was part Indian consulting arm Ericsson Global Services India Pvt Ltd

Web Developer – Self Employed Part-time (2010 - 2013) – Freelance and voluntary website development work alongside undergraduate studies.

Education

PhD in Computer Science – University of York, UK

- Conducted research in computer architecture, focusing on the implementation and optimization of a novel stack structure.
- Awarded the Doctoral Overseas Research Scholarship, covering full tuition and stipend.

Bachelors in Electronics Engineering – Indian Institute of Technology (IIT), India – Graduated with First Class (7.84/10) and secured admission through the highly competitive IIT Joint Entrance Examination (IIT-JEE 2009) which has acceptance rate of less than 2%.

Recent Training Courses and Certifications

- Data Analysis & Visualization by [Rice University](#) (Feb – Mar 2025)
- ISTQB [Certified](#) Software Tester (Feb 2025)
- Microsoft Azure Certifications ([AI-900 – Certificate](#) – Jan 2024, [DP-900 – Certificate](#) – Dec 2023, [AZ-900 Certificate](#) – Jul 2023)
- [Mini-MBA \(2022\)](#) - 12-month part-time virtual [leadership learning journey](#)
- Advanced Data Analytics Certificate ([in progress](#), Apr 2026 – present)
- IBM Data Science Professional Certificate ([in progress](#), Apr 2026 – present)

Core Skills

- **Consulting Skills:** Requirements gathering, stakeholder management, agility, problem solving, adaptability, analysis, delivery, sales and commercial acumen
- **People Skills:** Empathy, relationship building, collaboration, trust, respectful engagement, conflict minimisation, and productive stakeholder interactions
- **Programming:** Python, SQL, and Website Development (HTML, CSS & PHP)
- **BI & Visualization:** Excel, Power BI, and PowerPoint storytelling
- **Excellent Communication Skills:** IELTS Score of 8/9
